## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsui et al '767. Matsui et al '767 discloses an array of LED's 5 consisting of plural columns and rows, wherein each row of LED's in each column is connected in series and each column is connected in parallel. (see column 4, lines 8-14).

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 and 17-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Deese '965. Deese '965 discloses an array of LED's 26 consisting of plural columns and rows, wherein each row of LED's in each column is connected in series and each column is connected in parallel. (see column 7, lines 37+).

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 16 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deese '965 in view of Nobe et al '870. Deese '965 discloses the claimed invention except for the teaching of the high-current MOSFET switch across the capacitor 60a and 60b of Deese '965. Nobe et al '870 teaches high-current MOSFET switches (1, 2, 4 and 44-45) for protecting LEDs and circuitry from overloading. It would have been obvious to one skilled in the art at the time the invention was made to modify the circuitry of Deese '965 to include the MOSFET switches as taught by Nobe et al '870 in order to protect the circuitry and LEDs of Deese '965 from overloading

***Conclusion***

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Norman et al '589 discloses lighting assemblies which are similar to applicant's invention.
